Summary

I am a young passionate about technology and innovation, with knowledge in software application development. I have experience working with the .NET platform and am detail-oriented, with excellent problem-solving skills. I possess a strong ability to quickly learn new technologies and am eager to apply my skills in a dynamic professional environment.

Work experience

Web store for hardware products

I worked on a personal project where I developed my skills in web application development using technologies like ASP.NET MVC, Entity Framework, and programming languages such as C# and JavaScript. Throughout the project, I was responsible for designing and implementing features, working with databases, and optimizing performance. This experience helped me improve my problem-solving abilities and understanding of full-stack development, as well as gaining hands-on experience with front-end and back-end integration.

Desktop application for booking plane tickets

I worked on a personal project developed using the Java programming language, where I implemented text files for data storage, as required by the course instructor in my second year of the Java course. In this project, I focused on designing efficient algorithms for data manipulation, ensuring proper file handling, and managing the storage and retrieval of information. This experience enhanced my understanding of file I/O operations and helped me strengthen my problem-solving skills in Java.
